

Comfort Settings Rollout Schedule

This summer the MAC begins rolling out “Comfort Settings” at MSP, which are designed to improve comfort, reduce energy use and save money. Beginning in mid-June, the temperatures across MSP Terminals 1 and 2 will be set to range between 72-76 degrees F in the summer and 70-74 degrees F in the winter.[†]

The comfort settings are expected to generate an immediate savings of \$480,000 per year for a cumulative savings of \$19 million over 40 years. The settings will also help the MAC reach its goal to reduce greenhouse gas emissions by 80 percent by 2030*.

* As of June 2022, the MAC is 37 percent of the way toward reaching its 80 percent greenhouse gas reduction goal.

[†] Comfort settings are being managed by the MAC’s Energy Management Center staff.
